Audio Broadcast Kits Overview

The Portable Church® Audio Broadcast Kits harness the power of the Waves LV1 Mixing System. Waves is known best for its versatile and powerful plugin systems for recording and live sound. The LV1 system utilizes the power of their entire library of plugins and marries them with a computer based digital mixing platform that is as powerful as it is compact and portable. Available in both 16 & 64 Channel versions, this platform is endlessly upgradable with options for smart phone based Personal Monitor mixing, the ability to add a second console to control just monitors freeing up the FOH engineer to focus solely on the broadcast mix, and adding additional stage boxes to expand the input/output counts for the system.

Index

16 Channel Audio Kit	2
64 Channel Audio Kit	3

16 CHANNEL AUDIO KIT \$7,399

- Everything needed to set up a SoundGrid-powered live show
- Complete cost-effective mixing solution
- eMotion LV1 16-channel (mono/stereo) mixer with Waves eMo plugins
